

DUNG BEETLE FACTS

(Family name: *Scarabaeidae*)

Dung beetles navigate by
the moon, stars, and sun.

Dung beetles live on every
continent except Antarctica.

They are the world's strongest animal,
able to haul more than a thousand
times their own body weight.

Dung beetles can eat more than their
own body weight in a day.

They reduce disease by removing dung that
disease-carrying flies lay their eggs in.
